

Uneventful

Weekly Report 10/9/17 to 10/15/17

This past week in ISM was quite an uneventful one as we continued working on assessments as part of our regular routine. While researching I further narrowed down my topic and began to really start thinking about a final product idea related to the field of rapid prototyping and CNC machines. Most of the research I did this week helped to reinforce my previous ideas about this topic and helped to answer some questions which were brought up in previous assessments. This week was, however, a busy one in my other classes as we had several assignments due which was also coupled with the fact that we had a football game and a band competition at the end of that same week. Despite all these events, I did manage to balance out my workload and still complete my assignments on time. At this point in ISM, I was also starting to get worried as I had not started any cold-calls yet due to my inherent shyness. Next week I will be sure to build up my confidence and actually start calling professionals instead of reading more articles on the internet about my topic. Hopefully the calling process will become easier as I make more phone calls and that I will be able to schedule an interview with one of my contacts in the coming week in order to accomplish my SMART goals I set last week.
